

CONTEXT: prior day weak (close 5230.75 near its low). Today GAPS UP +33.5 (~60% of prior range) to open 5264.25 INSIDE the prior range (below prior high 5283). A big gap up that opens into prior-day supply -> the question is 'can bulls hold above yesterday's high?' They can't -> bear day.

- b1 gap-up bar closes DOWN (bear). First hint the gap gets sold. One-bar range; no trade.
- b2-b5 BULL SPIKE: 4 bull bars. b3 shaved-top (IBS 98), b5 big bull pokes 5290.25 ABOVE prior high 5283 = breakout into resistance. Bulls look great -- but first B0s here usually fail.
- b6 first bear bar after the spike, right at the poke above 5283 = REVERSAL BAR / failed B0. -> potential top of day. (BIAS flips to BEAR here.)
- b7 2nd bear bar. 5290 is now the high of day / LH.
- b8 weak/doji pullback bar -> sets up an H1 long attempt.
- b9 H1: first attempt to resume up -- but a LOWER HIGH (below 5290).
- b10 big bear bar (IBS 15) = FAILED H1 (fH1). Reversal CONFIRMED, sellers in control.
- b11-b12 b11 weak bull, b12 fH1 again (closes on low). Sellers hammer every bounce.
- b13-b14 b13 weak H2, b14 big bear closes BELOW the OPEN (5264) -> bear day confirmed; LH/LL.
- b15-b18 BEAR FLAG: doji + 3 small bars drift to the ema (~5268). With-trend short setup.
- b19-b25 COUNTER-TREND BOUNCE: 5 bull bars back to b25 HH 5278. The pullback that stops early shorts. Sell the failure, don't chase. (b19-25 forms an EXPANDING/2-sided pocket.)
- b26-b37 RESUME DOWN: LH b30, then b35-b37 strong bears to 5249.
- b38-b49 TRADING RANGE inside the trend (5245-5259): b40 LL, b41/b47 HH, chop that shakes both sides. Contracting/triangle behavior -- wait for the breakout, don't fade mid-range.
- b50-b54 RANGE BREAKDOWN (the money leg): b50 LH -> strong sell 5252 -> 5226.
- b55-b72 TREND TO THE LOW: LHs at b56/b62/b66/b71; b67 climax bear (-10.25) -> DAY LOW 5199 @b72.
- b73-b81 LATE BOUNCE: short-covering off 5199 up to 5221 (b80). Bias would flip BULL here, but ~8 bars to close -> no trade. Sit out.

ONE-LINE STRUCTURE: gap up -> bull spike -> FAILED B0 above prior high (b5/b6) -> fH1 confirm (b10) -> bear trend all day, sell every lower high, to 5199.

TRADE IDEAS (one position at a time; entry 1t beyond signal bar; STOP = 8t money-stop cap)
=====

- T1 LONG SETUP = 1EL (open bull spike B0) (signal bar b2 -> filled b4)
entry 5273.75 stop 5256.25 RISK 17.5 pt (RR at +2 = 0.1R)
scalp +2 = +2.0pt @b4 | 1R = -17.5pt | scalp+BE+run(2-lot) = +8.8pt
WHY: buy the gap-up bull spike -- SCALP ONLY, do not hold into prior-high resistance 5283
- T2 SHORT SETUP = 1ES fB0 > prior high (1Rev) (signal bar b6 -> filled b7)
entry 5280.50 stop 5287.25 RISK 6.8 pt (RR at +2 = 0.3R)
scalp +2 = +2.0pt @b7 | 1R = +6.8pt | scalp+BE+run(2-lot) = +2.0pt
WHY: b5 pokes 5290 above prior high 5283, b6 = bear reversal bar => FAILED BREAKOUT (fB0). This is the 1st reversal (1Rev) & flips bias to BEAR.
- T3 SHORT SETUP = 2ES B0 < open (w/trend) (signal bar b14 -> filled b15)
entry 5261.25 stop 5271.75 RISK 10.5 pt (RR at +2 = 0.2R)
scalp +2 = +2.0pt @b16 | 1R = -10.5pt | scalp+BE+run(2-lot) = +2.8pt
WHY: b14 strong bear closes BELOW the open (5264) => bear-day B0; 2nd short entry (2ES)
- T4 SHORT SETUP = 1ES fB0 of bounce / LH (signal bar b30 -> filled b31)
entry 5267.50 stop 5273.50 RISK 6.0 pt (RR at +2 = 0.3R)
scalp +2 = +2.0pt @b31 | 1R = +6.0pt | scalp+BE+run(2-lot) = +2.0pt
WHY: b25 HH fails, b30 is a LOWER HIGH => fB0 of the counter-trend bounce; sell the failed rally (new-leg 1ES)
- T5 SHORT SETUP = 1ES B0 range breakdown (signal bar b50 -> filled b51)
entry 5244.50 stop 5252.25 RISK 7.8 pt (RR at +2 = 0.3R)
scalp +2 = +2.0pt @b51 | 1R = +7.8pt | scalp+BE+run(2-lot) = +2.0pt
WHY: b38-49 trading range; b50 LH breaks it down => range-breakdown B0 short (the main leg 5252->5226)
- T6 SHORT SETUP = 2ES w/trend LH (signal bar b67 -> filled b68)
entry 5209.00 stop 5223.00 RISK 14.0 pt (RR at +2 = 0.1R)
scalp +2 = +2.0pt @b68 | 1R = -9.8pt | scalp+BE+run(2-lot) = +3.8pt
WHY: b64-66 bounce fails; b67 climax bear => with-trend 2nd entry short (2ES) into the day low 5199

TOTALS: SCALP+2 +12.0pt (\$+600/ES) | 1R -17.2pt (\$-862) | SCALP+BE+RUN +21.2pt (\$+1,062, 2-lot)
avg risk 10.4 pt (8t money-stop cap). Every entry is >= ~1R -> survives TR days.
The lone long (T1 gap-up spike) is scalp-only; never hold it into prior-high resistance 5283.
